

CLAIM

I claim,

5 The Drawer sommier, the structure of which is a cabi-
network piece, consists of a wooden framework (1)
having an inner wooden lattice (2) of detachable (9) or
fixed wooden pieces intended to set the mattress, which
can rest on the framework or be put slightly inside
depending on the different versions of the invention,
10 wherein the improvement comprises:
inner wooden crossbars (3) assembled on opposite
sides of the framework, their heights starting at the
enclosed bottom and ending at the wooden lattice,
thus giving it support and rigidity;
15 an enclosed bottom (4) of wood which is joined to the
crossbars and to the framework by the lower
part producing an air chamber (5) between the en-
closed bottom and the mattress;
inlaid corner pieces (6) of wood assembled on the
20 framework, either rounded or angular;
added detachable wooden pieces (7) thicker than the
normal ones and tooth shaped to maintain the flexi-
bility; and
an anchorage device (8) composed of two screws weld-
25 ed to an iron plate to fix the bed-back to the Drawer
sommier.
